

FIELD GUIDE FOR BUILDERS & TRADES

Is Your Bidding AI-Ready?

The 3-C checklist for shops that build every quote from scratch. Run it on your own business in 60 seconds — then you'll know exactly what's slowing your bids down.

FACT

Most contractors price every job from scratch. The slow quote loses the job — not the wrong one.

STEP 1 SCORE YOUR SHOP — CHECK ONE BOX PER ROW

C1

Captured — your numbers exist as data

Past jobs, real costs, and the quotes you sent are written down — not living in one estimator's head or a drawer of PDFs. If it isn't recorded, AI can't learn from it.

☐ YES☐ NOT YET

C2

Consistent — same format every time

The same categories and line items job to job, so this bid can be compared to similar past ones apples-to-apples. One-off formatting is the #1 thing that slows AI down.

☐ YES☐ NOT YET

C3

Controlled — one place, and it stays private

It lives somewhere you can search, and your pricing, margins, and client list never leave your building. Your data trains *your* AI — not someone else's.

☐ YES☐ NOT YET

STEP 2 WHAT IT UNLOCKS

A

Assessment

Reads the incoming job — scope notes, site photos, plans — and tells you what kind of job it really is and what's likely to cause change orders, before you price it.

E

Estimation

Pulls your own history for the cost basis: jobs like this ran X in labor, Y in materials, and here's where you usually under-bid. Your numbers, surfaced — not invented.

Q

Quotation, in your context

Drafts the client-facing quote in your format, your terms, your voice, at the margin you set. You review and send. The AI never sends it for you.

STEP 3 ASK IT THIS

- › What did we charge for a job like this last year — and what did it actually cost us?
- › Build a first-draft estimate for this scope from our past jobs.
- › Which line items do we consistently under-bid?
- › What usually triggers change orders on this type of project?
- › At price X, what's my margin — and is it in line with similar jobs?
- › Compare this estimate to the last five like it — what did we miss?

YOUR SCORE

Two or fewer YES boxes? That's the gap — and it's fixable.

"I turn the AI you already pay for into the AI that actually works for your business."
