

BIDDING AI

A PRIVATE BIDDING SYSTEM FOR BUILDERS & TRADES

Own Your AI. Don't Rent It.

The fastest, most accurate bid wins the job. Here is how to get there without shipping your prices, your margins, and your hard-won know-how to someone else's server.

THE CATCH

Nearly every AI estimating tool runs in the cloud, rented per seat, per year, forever. Their model gets smarter by learning from every job uploaded to it. **That includes the shop bidding against you.** Speed is real. But you are teaching a shared model your secrets to get it.

RENTED CLOUD AI vs. YOUR PRIVATE AI

The rented cloud tool

- ✗ Your plans and prices live on their servers
- ✗ One shared model learns from everyone, rivals included
- ✗ Per-seat fee every year, with no end
- ✗ Generic national cost data, not your numbers
- ✗ Stop paying, and you lose the tool and the history

Your Dr. Data build

- ✓ Runs local. Nothing leaves your building
- ✓ Learns from your jobs, and only yours
- ✓ You own it. Built once, yours to keep
- ✓ Priced from your real history and margins
- ✓ Your data becomes an asset, not a subscription

WHAT THE DATA SHOWS ON AI ESTIMATING

51%

less time to complete an estimate

20%

improvement in bid accuracy

3-6

months to full ROI payback

260

hours freed per year, small shops

THE ROI MATH

$(\text{Hours saved per estimate} \times \text{estimator hourly rate} \times \text{estimates per year}) - \text{annual tool cost} = \text{net annual ROI}$

100 estimates a year $\times$ 6 hours saved $\times$ \$75 an hour = \$45,000 in recaptured capacity.

Minus a \$3,600 tool cost = **\$41,400 net annual ROI.**

Figures reflect published industry benchmarks for AI-assisted estimating. Your numbers depend on your bid volume and rates. A private build changes the cost side of this equation: you own the asset instead of renting a seat.

LET'S TALK

Bring the tablet. Keep the data. Win the bid.

I help you make \$\$\$ with your data.
